

# Moving to the cloud to modernize and optimize

A specialized business insurance and risk management intermediary wanted to downsize their IT infrastructure footprint and take advantage of cloud modernization by migrating their data center to Microsoft Azure.

## Challenge

The firm needed a trusted partner to help assess their colo environment, create a migration roadmap to the cloud, and then execute the migration.

There was a sense of urgency because their colo environment was closing in five months. To achieve optimal results, they wanted a partner who would not only ensure they met their deadline, but who would also build a solid cloud foundation based on deep expertise, experience, and best practices.

They saw that having a solid cloud foundation was critical to ensuring not just a successful migration, but also strong governance and controls, and a foundation from which to modernize and evolve their cloud-based services long term.

## Solution

The Inviso team assessed, planned, and migrated the colo data center to Azure, drawing upon Cloud Adoption Framework workshops and a Landing Zone design to ensure proper governance and controls were thought through from the outset of the project.

A key benefit was that this approach accelerated their timelines to help them meet their pressing deadline.

The migration from their legacy architecture to Azure removed their dependency on an aging physical infrastructure, enabled greater business agility, avoided wasteful CapEx, and unlocked the opportunity for broader adoption of the Azure Cloud by other departments.

## Results

- Increased resiliency by moving them to Azure as primary data center.
- Provided hands-on deployment to accelerate and manage the process.
- Met the migration timeline.

"Inviso immediately became a trusted team member, masterfully guiding us through a complex Azure Migration on time and within budget. With a deep resource bench supporting the project, Inviso's staff worked through unexpected changes with determination and grace."

-Senior Member of customer team

## Technologies & tools

- Cloud Adoption Framework workshops
- Azure Landing Zone design for proper governance and controls
- Azure Migrate
