

Saving money with Azure Virtual Desktop

A premiere architectural millwork and casework manufacturer for food service, hospitality, and commercial projects in the Pacific Northwest area uses state-of-the-art technology and automation of everything from submittals, contracts, project tracking, and high-level communications. They turned to Inviso for help managing capacity and costs.

Challenge

Maintaining high-end workstations for remote drafters is costly and labor intensive. Variations in software and update versions impacts productivity.

Solution

Inviso collaborated with the client to deploy a new **Azure subscription and Landing Zone dedicated to Azure Virtual Desktop** and supporting resources. The Landing Zone included a site-to-site VPN, Domain Controller, SQL Server, and File Server to host their production database and drawing files.

Inviso created a **standard image that was deployed to the Azure Virtual Desktop Session Hosts and leveraged FSLogix** for user profiles to provide consistent user experience.

Inviso **provides a managed service** to monitor and adjust resources to continuously optimize cost and performance.

Results

The client now has a low-cost, modern drafting environment in the cloud that enables their drafters to focus on design work without the common interruption of technological challenges while saving 35% over 5 years.

“Inviso was key to help us turn our vision into reality by leveraging the cloud to solve our technical challenges.”
